Package: naruto (via r-universe)

January 15, 2025

Type Package

Title An Interface to the Naruto Database API

Version 0.0.0.9000

Description The NarutoDB API <https://narutodb.xyz> offers a
comprehensive database featuring all the characters, clans,
villages, kekkei genkai, tailed beasts, teams, akatsuki, and
rara members from the renowned anime and manga series *Naruto*.
The API provides detailed information on each character,
including their names, appearances, personalities, jutsus, and
ninja tools. This package interfaces with the NarutoDB API
through R.

naruto_get_characters *Get all Naruto characters available from NarutoDB*

Description

Get all Naruto characters available from NarutoDB

Usage

```
naruto_get_characters(
  base_url = "https://narutodb.xyz",
  json = FALSE,
  clean_names = TRUE
)

naruto_get_character_by_id(id, base_url = "https://narutodb.xyz")
```

Arguments

base_url	Base URL of the NarutoDB API. This is currently set to "https://narutodb.xyz".
json	Logical. Should output be returned as JSON? If FALSE (default), returns a data.frame. Otherwise, returns a standard JSON format output.
clean_names	Logical. Should data.frame output variable names be cleaned? If TRUE (default), variable names are tidied appropriately. Otherwise, variable names are kept as is. Only evaluated when json = FALSE.
id	A numeric value or vector of numeric values for the unique identifier of Naruto characters.

Value

If json = TRUE, returns a simplified and flattend data.frame. If json = FALSE, returns a standard JSON format output. See https://narutodb.xyz/docs/characters/characterSchema for schema of NarutoDB characters output.

Examples

```
naruto_get_characters()
naruto_get_character_by_id(id = 55)
```

naruto_select_genin   *Select genin*

Description

Select genin

Usage

```
naruto_select_genin()
```
